Masako Wright, Wildlife Biologist, masakowright@fs.fed.us, 385.239.9704

The Logan Ranger District of the Uinta-Wasatch-Cache National Forest invites the community to join us for the shrub planting project to improve mule deer winter habitat. Come join in the fun, exercise, meet new people as well as give back to the local community and improve the wildlife habitat!

Volunteers will be planting mountain big sagebrush, mahogany, snowberry and bitterbrush seedlings.

Volunteers are required to dress for the weather and the nature of the work by wearing gloves, long sleeves, long pants, and boots or closed toed shoes, and bring lots of water. They are also encouraged to bring shovels, bulb planting tools or small augers if they have them.

Please join the Logan Ranger District as we work to improve the wildlife habitat in our area.

Please RSVP to receive further instructions prior to the project day and in case of inclement weather.

To RSVP, please contact Lisa Thompson, lisathompson@fs.fed.us, or Masako Wright, masakowright@fs.fed.us
